NEWS 1		Web Page for STN Seminar Schedule - N. America
NEWS 2	NOV 21	CAS patent coverage to include exemplified prophetic substances identified in English-, French-, German-, and Japanese-language basic patents from 2004-present
NEWS 3	NOV 26	MARPAT enhanced with FSORT command
NEWS 4	NOV 26	CHEMSAFE now available on STN Easy
NEWS 5	NOV 26	Two new SET commands increase convenience of STN searching
NEWS 6	DEC 01	ChemPort single article sales feature unavailable
NEWS 7	DEC 12	GBFULL now offers single source for full-text coverage of complete UK patent families
NEWS 8	DEC 17	Fifty-one pharmaceutical ingredients added to PS
NEWS 9	JAN 06	The retention policy for unread STNmail messages will change in 2009 for STN-Columbus and STN-Tokyo
NEWS 10	JAN 07	WPIDS, WPINDEX, and WPIX enhanced Japanese Patent Classification Data
NEWS 11	FEB 02	Simultaneous left and right truncation (SLART) added for CERAB, COMPUAB, ELCOM, and SOLIDSTATE
NEWS 12	FEB 02	GENBANK enhanced with SET PLURALS and SET SPELLING
NEWS 13	FEB 06	Patent sequence location (PSL) data added to USGENE
NEWS 14	FEB 10	COMPENDEX reloaded and enhanced
NEWS 15	FEB 11	WTEXTILES reloaded and enhanced
NEWS 16	FEB 19	New patent-examiner citations in 300,000 CA/CAplus patent records provide insights into related prior art
NEWS 17	FEB 19	Increase the precision of your patent queries -- use terms from the IPC Thesaurus, Version 2009.01
NEWS 18	FEB 23	Several formats for image display and print options discontinued in USPATFULL and USPAT2
NEWS 19	FEB 23	MEDLINE now offers more precise author group fields and 2009 MeSH terms
NEWS 20	FEB 23	TOXCENTER updates mirror those of MEDLINE - more precise author group fields and 2009 MeSH terms
NEWS 21	FEB 23	Three million new patent records blast AEROSPACE into STN patent clusters
NEWS 22	FEB 25	USGENE enhanced with patent family and legal status display data from INPADOCDB
NEWS 23	MAR 06	INPADOCDB and INPAFAMDB enhanced with new display formats
NEWS 24	MAR 11	EPFULL backfile enhanced with additional full-text

AB A method for the in-situ treatment of a pyridine-2,3-dicarboxylic acid ester with an oxidizing agent, such as hydrogen peroxide, to improve product quality is described. The method for the in-situ removal of impurities from a sapond. solution of pyridine-2,3-dicarboxylic acid esters comprises providing a solution of a pyridine-2,3-dicarboxylic acid ester, sapong. the solution with a base to form the corresponding pyridine-2,3-dicarboxylic acid salt, reacting the solution with an oxidizing agent in an amount effective to remove impurities, acidifying the solution with an acid to convert the pyridine-2,3-dicarboxylic acid into the corresponding pyridine-2,3-dicarboxylic acid, and collecting a purified solution comprising a pyridine-2,3-dicarboxylic acid (e.g., 5-methyl-2,3-pyridinedicarboxylic acid).

AB   A strong, cooperative O-H•••O hydrogen bond network directs
     isostructurality in pyrazinetetracarboxylic acid, pyridinetetracarboxylic
     acid, and pyromellitic acid dihydrates.  H2O and COOH groups reorganize
     their H bonding groups in an invariant network leading to
     Ow-H•••N ↔ C-H•••Ow mimicry.  The degree of
     similarity is related to the size of the multicenter synthon and the
     strength of the Oacid-H•••Owater hydrogen bond.

I

AB A method for the preparation of 5,6-disubstituted-3-pyridylmethylammonium halide compds. I (Z = H, halo; Z1 = H, halo, cyano, nitro; X = Cl, Br, iodo, alkylsulfonyl; Y and Y1 = alkoxy, amino; Q = cyclic or hydrocarbyl ammonium) is provided. I can be used for the preparation of 5-(substituted methyl)-2,3-pyridinedicarboxylic acids. Thus, bromination of di-Me 5-methyl-2,3-pyridinedicarboxylate with NBS in the presence of 2,2'-azobisisobutyronitrile in CCl4 gave 57% di-Me 5-(bromomethyl)-2,3-pyridinedicarboxylate which on treatment with amines in EtOH gave I.

I

AB The title compds. [I; R1, R3 = H, alkyl; R2 = H, alkyl, (un)substituted phenylalkyl; R4, R5 = alkoxy], useful as pharmaceutical and agrochem. intermediates, e.g., for herbicidal 2-(2-imidazolin-2-yl)pyridine-3-carboxylic acids (no data), were prepared by a process comprising cyclocondensation of propenals and analogs R1CH:CR2COR3 with α-halooxalacetate esters R4COCHXCOCOR5 (X = halo) and NH3, possibly in the presence of a secondary or tertiary amine or an ammonium salt, in an aprotic H2O-immiscible solvent at 20-200°, at atmospheric or elevated pressure. Thus, 44.5 g di-Et α-chlorooxalacetate in 250 mL PhCl was added dropwise into a mixture of 21.0 g 2-ethyl-2-propenal in 350 mL PhCl at 88-94° over 40 min while NH3(g) was bubbled through the system. After the addition was completed the temperature was raised to 115° and NH3(g) bubbled for 4 addnl. h to give 76.5% title compound I [R1 = R3 = H, R2 = Et (II; R4 = R5 = EtO)] which (10.3 g) was sapond. by refluxing for 3.5 h with 48% aqueous NaOH in PhMe/H2O and acidified to give 5.9 g title acid II (R4 = R5 = OH).

AB The elusive species 2-aza-2,4-cyclopentadienone (I) is generated from an insol. polymeric precursor. The liberated intermediate acts either as a diene or a dienophile in Diels-Alder reactions. Thus, treatment of the polymeric 5-sulfonate of 3-pyrrolidin-2-one with the polymeric monoester of HO2CC.tplbond.CCO2H at 100° in DMSO gives a polymeric adduct, which, after sapon., gives 2,3-pyridinedicarboxylic acid. This acid results from the reaction of I as a diene with the C.tplbond.C bond, followed by CO extrusion and aromatization. I reacts as a dienophile with the polymeric ester of 2-furoic acid to give, after basic hydrolysis and Clemmensen reduction, δ-coniceine.

I

AB The title compds. (I; R1 = OR8, alkyl, alkenyl, alkynyl, cycloalkyl, Ph, furyl, PhCH2; R2 = H, acyl; R1R2 = bond; R3, R5 = H, halo, NO2, cyano, Q; R4 = H, halo, OH, NO2, Q; R6 = alkyl, cycloalkyl; R7 = alkyl, cycloalkyl, alkenyl, Ph, PhCH2; R8 = H, salt-forming cation; W = N, CH; one of L, M = CO, the other = CR6R7; Q= XYZC; X = cyano, thiol, amino, oximino, etc.; Y = H, alkyl, X; Z = H, alkyl) were prepared as herbicides. Di-Me 5-ethylpyridine-2,3-dicarboxylate was successively photobrominated with NBS, condensed with NaSMe, sapond. with aqueous NaOH, refluxed with Ac2O to yield an anhydride, and condensed with 2-amino-2,3-dimethylbutyramide to give 2-[(1-carbonyl-1,2-dimethylpropyl)carbonyl]-[5-[1-methylthio)ethyl]nicotinic acid, which was cyclized in 3 M NaOH to give 2-(5-isopropyl-5-methyl-4-oxo-2-imidazolin-2-yl)-5-[1-(methylthio)-ethyl]nicotinic acid (II). At 1 kg/ha preemergent, II gave complete control of Echinochloa crusgalli.

AB A solution of 4 g. 2-hydroxymethyleneindan-1-one, 2.1 g. cyanoacetamide, and 0.5 g. piperidine (I) in aqueous EtOH was kept at 50-5° 48 h., the mixture filtered, to the filtrate concentrated in vacuo was added 4-5 mL. more I, the mixture allowed to stand at 50° 24 days, and the dark brown solid filtered off, giving 3-oxo-2-cyano-4a-hydroxy-2,3,4,4a-tetrahydro-4-azafluorene (II), yellow crystals, m. 318-20° (decomposition) (from AcOH). II (3.6 g.) heated in a sealed tube at 170° 15 h. with 6 mL. fuming HCl and filtered gave 2.4 g. of 3-hydroxy-4-azafluorene-HCl (III), m. 302-6°, yellow prismatic needles from EtOH containing a few drops of HCl, which on being heated in NaOH solution gave on cooling colorless needles of the Na salt of III which were filtered off and treated with a large volume of H2O to yield III, yellow needles, m. 300-302°. A mixture of 1.4 g. III.HCl, 8 mL. POCl3, and 8 g. PCl5 was refuxed 96 h., evaporated in vacuo, the residue treated with ice, made alkaline with Na2CO3, extracted with Et2O, and the extract dried with K2CO3 and evaporated The alkaline solution on acidification gave 0.8 g. unchanged III, which was retreated with POCl3 and PCl5 giving a total of 0.35 g. crude 3-chloro-4-azafluorene (IV), chromatographed on Al2O3, eluted with petr. ether, giving 0.13 g. IV m. 92-3° (from petr. ether), colorless prisms, λ 254 and 311 mμ, ε 8700 and 18,000 resp.; IR spectrum given. Reduction of IV in NaOEt solution with Raney Ni gave a trace of 4-azafluorene (V). Reduction of IV with HI and red P, and the product made basic, steam distilled and extracted with Et2O gave a trace of V (picrate, m. about 200°). A solution of 4.8 g.

β-phenyl-β-aminoacrylonitrile and 8 g. Et ethoxymethyleneoxalacetate in 6 mL. AcOH heated 1.5 h. on a H2O-bath and evaporated in vacuo gave 5.9 g. di-Et 3-cyano-2-phenylpyridine-5,6-dicarboxylate (VI), silky needles, m. 92-3° (from EtOH). A mixture of 3.2 g. VI and 1.6 g. NaOH in 12 mL. 30 percent EtOH refluxed 20-24 h., filtered, and acidified with HCl, gave 2.4 g. 2-phenylpyridine-3,5,6-tricarboxylic acid (VII), needles from H2O, m. 256-7° with frothing at 153-60° (picrate, m. 274-6°). VI sapond. 4-5 h. gave 3-carbamoyl-2-phenylpyridine-5,6-dicarboxylic acid, prismatic needles from H2O, m. 295° with frothing at 160-6°. VI sapond. with 2 equivs. of alc. KOH gave 3-cyano-2-phenylpyridine-5,6-dicarboxylic acid, m. 202-4° (from H2O) with frothing at 152-6°. VII (1.5 g.) refluxed 1.5 h. with 10 mL. SOCl2, evaporated, the residue treated at 60° 4 h. with 25 mL. PhNO2 and 3.0 g. AlCl3, allowed to stand overnight, decomposed with ice and HCl, steam distilled, filtered, and the filtrate concentrated and filtered again gave 0.8 g. 4-azafluorenone-2,3-dicarboxylic acid (VIII), light yellow rectangular plates, m. 292° (from H2O). Decarboxylation of VIII by heating in 50-mg. batches gave 12 mg. 4-azafluorenone (IX), long flat needles, m. 139°, from H2O, identical with IX prepared by CrO3 oxidation of 4-azafluorene (X) IX picrate, m. 197° (from EtOH); IX semicarbazone, colorless needles, m. 257-8° (from EtOH); IX oxime, colorless prisms, m. 245-6° (from EtOH)]. Reduction of 0.1 g. IX with 5 mL. HI and 0.2 g. red P gave X.HI which on dissolving in H2O and basifying gave X, colorless prisms, m. 93° (from petr. ether) [picrate, m. 215°; picrolonate, yellow needles from BuOH, m. 243-4° (decomposition)]. UV spectra in EtOH, PO4 buffer pH 7, and 0.1N HCl, and IR spectrum are given. A mixture of 5.7 g. BzCH2CO2Et, 4.4 g. HC(OEt)3, and 6.1 g. Ac2O refluxed 1.5 h. and distilled gave 2.6 g. Et ethoxymethylene(benzoyl) acetate (XI), b4 190-2°. A mixture of 2.6 g. XI, 1.5 g. β-phenyl-β-aminoacrylonitrile, and 3 mL. Ac2O heated on a H2O bath 8 h. and evaporated gave Et 3-cyano-2,6-diphenylpyridine-5-carboxylate (XII), m. 145° (from EtOH). Sapon. of 0.2 g. XII 20 h. with 40% alc. NaOH, filtration, and acidification gave 0.15 g. 2,6-diphenylpyridine-3,5-dicarboxylic acid, yellow prisms from EtOH, m. 283°. A mixture of 8 g. β-phenyl-β-aminoacrylonitrile, 10.3 g. Et ethoxymethyleneacetoacetate, and 10 mL. AcOH was heated 3.5 h. on a steam bath, evaporated in vacuo, the residue warmed with 50 mL. EtOH, cooled, and filtered. From the solid, 3.3 g. Et 3-cyano-2-phenyl-6-methylpyridine-5-carboxylate (XIII), yellow rectangular plates from petr. ether, m. 86-8°, and 0.43 g. α-[(2-cyano-1-phenylvinylamino)methylene]acetoacetate (XIV), yellow rhombs from EtOH, m. 150-2°, were obtained. From the filtrate, 0.5 g. more XIII, and 3 compds. m. 240-1°, 296-8°, and 216° were obtained. Sapon. of XIII gave the corresponding acid (XV), yellow prisms from H2O, m. 211-12°, frothing at 139-40°, which was cyclized by treating the chloride with AlCl3, in PhNO2 to give VIII. Treatment of 2 g. VIII with 7 g. PCl5 in CHCl3, evaporation and treatment of a cold CS2 solution of the acid chloride with 6 g. AlCl3 gave 0.7 g. 3-methyl-4-azafluorenone-2-carboxylic acid (XVI), m. 248-9° (from H2O), which was decarboxylated by heating with Cu bronze to 3-methyl-4-azafluorenone, m. 120-1° (from petr. ether). Reduction of 0.4 g. XVI with 12 mL. HI and 0.5 g. red P gave 3-methyl-4-azafluorene-2-carboxylic acid-HI, converted to the free base (XVII), colorless needles from H2O, m. 260-2°. XVII was

decarboxylated by heating with Cu bronze to 3-methyl-4-azafluorene, m. 47-8° (picrate, yellow needles, m. 211°; picrolonate, yellow prisms from EtOH, m. 252-4°). XIV (0.35 g.) treated with 2 mL. cold H_2SO_2 gave 0.2 g. compound, m. 112-13° evolving gas above 170°, colorless flat needles from H_2O, giving NH_3 on being heated with alkali.

AB A series of Pfitzinger condensations [cf. Pfitzinger, J. prakt. chemical [2], 56, 283(1897)] using n-alkyl Me ketones (alkyl = Me through C6H13) has been carried out. The unsym. ketones produced 2 isomeric cinchoninic acids (I), a 2-monosubstituted acid and a 2,3-disubstituted acid, the monosubstituted compound usually being formed in the larger amount A new sequence of syntheses has been developed in order to establish the structure of 1 series of these isomeric I. Isatin (II) (60 g.), 200 cc. 34% KOH in dilute EtOH, 88 g. EtAc, and 375 cc. H2O refluxed 72 hrs. with stirring, about 125 cc. liquid distilled off, the residue made faintly acidic and filtered, the filtrate acidified strongly, and the precipitate filtered off,
washed, and dried gave 70 g. crystalline mixture of isomeric I, decompose above 300° after sintering at 248°, which repeatedly recrystd.
from H2O and aqueous EtOH gave 2,3-dimethylcinchoninic acid (III), m. above 320° with rapid decomposition AcCO2H (25 g.) and 17 g. EtCHO in 100 cc. EtOH treated during 1.5 hrs. at about 5° with 27 g. PhNH2 in 50 cc. EtOH, the mixture warmed gently 3 hrs., refluxed 7 hrs., concentrated to 110°, and cooled, and the yellow solid deposit purified with EtOH

Updated Search

and Me2CO gave 4.5 g. 2-ethylcinchoninic acid (IV), m. 180-1°. Samples of III and IV titrated with the aid of a Beckmann pH meter showed that the pH (8.2) at the neutralization point was identical for both acids. The composition of the crude mixture of III and IV obtained in the reaction was estimated to contain about 85% III, as determined by the m.p. behavior of a series of known mixts. of purified III and IV. II (60 g.), 120 g. PrAc, 200 cc. 34% KOH, and 370 cc. H2O gave in the usual manner 81 g. mixed acids, m. beginning at 131°, which recrystd. gave the major product, 2-propyl cinchoninic acid, silvery white plates, m. 159.0-9.5° (decomposition); the crude reaction product (30 g.) recrystd. repeatedly gave 7 g. 3-ethyl-2-methylcinchoninic acid (V), m. above 220°, which recrystd. from dioxane gave pure V, white friable powder, m. 257-8° (decomposition); the crude product contained 20-5% V. V heated gave with decarboxylation 3-ethyl-2-methylquinoline (VI), which yielded a picrate, m. 227-30° (decomposition). II (60 g.), 108 g. BuAc, 200 cc. 34% KOH, and 375 cc. H2O gave similarly 119 g. crude product, m. beginning at 121°, which recrystd. extensively gave 2-butylcinchoninic acid, white friable powder or very fine leaflets, m. 141-2°, which was decarboxylated to 2-butylquinoline, identified as the picrate, m. 162°. Fractional extraction of the crude reaction product gave a small amount of the isomeric 2-methyl-3-propylcinchoninic acid, snow-white powder, m. above 290° (decomposition). II (60 g.), 105 g. AmAc, 400 cc. 34% KOH, and 900 cc. H2O refluxed 78 hrs. with stirring gave similarly 79 g. crude mixed product, m. beginning about 125°, which recrystd. repeatedly gave 2-amylcinchoninic acid (VII), m. 135-6° (slight decomposition), previously regarded by Salzer, et al. (C.A. 43, 1415c), as 3-butyl-2-methylcinchoninic acid (VIII). VII decarboxylated, and the resulting product treated with picric acid gave 2-amylquinoline picrate, m. 103.0-3.5° (from aqueous EtOH). The crude product extracted with dioxane, and the residue from the extract recrystd. from EtOH gave 3-butyl-2-methylcinchoninic acid, granular white powder, m. 261-3° (decomposition), which constituted only about 5% of the crude product; a sample decarboxylated and treated with picric acid gave 3-butyl-2-methylquinoline picrate, fine yellow needles, m. 210-12° (decomposition). II (50 g.), 75 cc. C6H13Ac, 180 cc. 34% KOH, and 300 cc. H2O refluxed 96 hrs. with stirring gave 82 g. crude product, m. 136-40° (from H2O), which recrystd. repeatedly from MeOH gave 2-hexylcinchoninic acid (IX), m. 140-1°. IX decarboxylated and treated with picric acid in MeOH gave 2-hexylquinoline picrate, m. 110-12° (decomposition). 2-Methylcinchoninic acid (8 g.) in 200 cc. H2O containing 2 g. NaOH treated with stirring and heating on a steam cone with 67 g. KMnO4 in 1200 cc. H2O dropwise during 7 hrs., the mixture heated 70 hrs., treated with a few cc. EtOH to destroy the excess KMnO4, and filtered, the clear filtrate concentrated to about 500 cc., acidified with HNO3, and treated with 200 cc. aqueous hot solution containing 17 g. Cu(OAc)2, the pasty, blue precipitate filtered off, washed with about 500 cc. M AcOH, stirred while being treated with gaseous H2S, and filtered, the filtrate evaporated to dryness, the residue (about 2 g.) extracted with hot MeOH, the purplish gel which set to a solid (1.5 g.) powdered and extracted in a Soxhlet apparatus with EtOAc, and the extract evaporated gave 2,3,4,6-pyridinetetracarboxylic acid, light tan solid, m. 182-4°, expanded to resolidify and then melted with extensive decomposition at about 223-7°. (EtO)2CHCOCH2CO2Et (X) (45 g.) added to 4.8 g. Na in 100 cc. EtOH, the mixture treated during 70 min. at reflux temperature with 26 g.

EtBr, refluxed 13 hrs., and filtered, the filtrate diluted with H2O and extracted with Et2O, and the extract dried with Na2SO4 and fractionated gave 38.5 g. (EtO)2CHCOCHEtCO2Et (XI), b5 118-21°, n20D 1.4270, d2020 1.0085, MRD 62.57, 63.61; it gave with aqueous FeCl3 a deep amber color within 1 min. XI (35.5 g.), 145 cc. 2N KOH, and 125 cc. MeOH refluxed 1 hr. with stirring, the MeOH distilled off, the alkaline solution extracted with Et2O, and the extract dried with Na2SO4 and fractionated gave 16.2 g. (EtO)2CHCOPr (XII), b9 78-9°, n20D 1.4130, d2020 0.9187, MRD 47.06; it gave with aqueous FeCl3 during 0.5 hr. a deep golden-brown color. XII treated with KCN and (NH4)2CO3 in aqueous EtOH gave 5-diethoxymethyl-5-propylhydantoin, m. 150°, XII gave a semicarbazone, m. 244° (decomposition); and a 2,4-dinitrophenylhydrazone, bright orange solid, m. 285-6° (decomposition). XII (10 g.) and 6.35 g. II in 22 cc. aqueous alc. KOH and 50 cc. H2O refluxed 72 hrs. with stirring, the mixture cooled, extracted with Et2O to recover a small amount of XII, acidified to precipitate inorg. salt and 3.2 g. II as an agglutinous red mass, and filtered, the filtrate basified with aqueous Na2CO3, concentrated to 75 cc. and acidified with concentrated HCl, and the resulting spongy, amorphous material crystallized from C6H6 gave 3.3 g. 2-diethoxymethyl-3-ethylcinchoninic acid (XIII), yellowish solid, m. 145-50° (recrystd. from C6H6 and Skellysolve A, fibrous white solid, m. 146.5°). XIII (750 mg.) heated about 4 hrs. with 60 cc. 0.25N H2SO4 on the steam cone, and the solution concentrated and chilled deposited about 500 mg. (88%) material, which recrystd. from hot dilute MeOH gave 3-ethyl-2-formylcinchoninic acid (XIV), white crystalline solid, m. 222-3° (decomposition); it gave a pos. Schiff test for aldehyde. XIV (0.5 g.), 3 g. amalgamated Zn, 12 cc. H2O, 3 cc. EtOH, and 15 cc. concentrated HCl refluxed 5.5 hrs., the liquid decanted, diluted with an equal volume H2O and sufficient aqueous NaOH to precipitate Zn(OH)2, and steam distilled to give 100 cc. distillate, the distillate extracted with Et2O, the extract dried and evaporated, and the small amount light brown oily residue treated with picric acid gave the picrate of VI, bright yellow crystals, m. 229.0-9.5° (decomposition); the mother liquor from the steam distillation gave 200 mg. brown material which could not be purified, since it charred on burning and underwent extensive decomposition at 250-4°; this product was possibly V. X alkylated in the usual manner with BuBr yielded (EtO)2CHCOHBuCO2Et (XV), b. 124-7°, n20D 1.4296, d2020 1.001, MRD 71.00; it gave a russet color with aqueous FeCl3 within 2 min. XV hydrolyzed with KOH in MeOH gave (EtO)2CHCOAm (XVI), b8-9 94°, b. 222°, n20D 1.427, d2020 0.912, MRD 56.90, which heated with KCN and (NH4)2CO3 in a sealed tube at 110° yielded 5-amyl-5-(dimethoxymethyl)hydantoin, white crystals, m. 119-20°. XVI did not give with II in alkaline solution a cinchoninic acid. Cl2CHCO2H was converted to (MeO)2CHCO2Et (XVII), b4-5 57-60°, n20D 1.4078, d2020 1.054, MRD 34.55. XVII condensed with EtOAc in the presence of Na yielded 76% (MeO)2CHCOCH2CO2Et (XVIII), b4 104.0 ± 0.5°, n20D 1.4286, d2020 1.084, MRD 45.15, which immediately gave a blood-red color when shaken with aqueous FeCl3. XVIII gave with H2NCONHNH2.HCl a compound which was apparently H2NCONHN:CHC(:NNHCONH2)CH2CO2Et, m. 227° with charring. XVIII

alkylated with NaOEt and BuBr gave (MeO)2CHCOCHBuCO2Et, b4-5 128.5-9.5°, n20D 1.4342, d2020 1.019, MRD 62.90; this sapond. with KOH in MeOH yielded 70% (MeO)2CHCOAm (XIX), b4-5 98-100°, n20D 1.4218, d2020 0.939, MRD 47.10. XIX gave a semicarbazone, white crystals, m. 241.2° (decomposition), and a 2,4-dinitrophenylhydrazone, fluffy bright orange powder, m. 185-6°. XIX gave with KCN and (NH4)2CO3 5-amyl-5-(dimethoxymethyl)hydantoin, m. 94-5°. XIX (9 g.), 5.4 g. II, 25 cc. 34% aqueous KOH, 45 cc. H2O, and 25 cc. EtOH refluxed 72 hrs. with stirring yielded 8 g. 3-butyl-2-dimethoxymethylcinchoninic acid (XX), m. 155-6° (from C6H6-Skellysolve A). XX (0.75 g.) in 75 cc. 0.4N H2SO4 heated 5 hrs. on the steam bath while adding from time to time small amts. H2O to keep the volume constant, the mixture cooled, and the resulting crude product (0.6 g., 94%) recrystd. from hot EtOH gave, 3-butyl-2-formylcinchoninic acid, small white crystals, m. 207° (decomposition), gave a pos. Schiff test and a raspberry-red with 2N aqueous KOH. XX in aqueous EtOH refluxed with concentrated HCl and amalgamated Zn, the resulting product dissolved in EtOH containing NaOH, the solution refluxed and neutralized, and the tan precipitate recrystd. from aqueous EtOH gave 3-butyl-2-methylcinchoninic acid, m. 261-4° with darkening. The substitution of the alkyl groups into the 2-, 3-, or 2,3-positions of cinchoninic acids did not significantly change the maximum or min. points of the ultraviolet absorption; the 2-formylcinchoninic acids exhibited a change, evidently due to a lengthening of the conjugation of the unsatn.

AB (CH2Cl)2 extraction of the upper parts of the plant in the presence of 10% NH4OH, treatment with 10% H2SO4, addition of NH4OH, and extraction with CHCl3 gave

Updated Search

the crude alkaloid, which, rubbed with Me2CO yielded (from 5 kg. plant matter) some 20 g. makrotomine, C15H27O5N, m. 95-7°, [α]D -6.9°, picrate, m. 130-2° (from EtOH). Sapon. with 2N NaOH gave Me2CO and trachelanthamidine (cf. C.A. 41, 3092b), as well as tarry materials. Sapon. with Ba(OH)2 gave the same result. Makrotomine (3 g.) with KIO4-H2SO4 at room temperature gave AcH, (CO2H)2, trachelanthamidine, and Me2CO. Trachelanthamidine is not affected by HIO4. Thus makrotomine is an ester of trachelanthamidine with some acid which decompose on hydrolysis and forms Me2CO. Since HIO4 oxidation requires 1 mole O per mole alkaloid and the products are those cited above, the alkaloid is the ester of 2,3-dihydroxy-2-(1-hydroxyethyl)-3-methylbutyric acid with hexahydro-3-h-pyrrolo [1,2-al pyrrole-1-methanol.

AB cf. C.A. 46, 983b. Condensations of ene amines, MeC(NH2):CHCN (I), MeC(NH2):CHCO2Et (II), MeC:NHCH2COMe (III), with EtOCH:C(CO2Et)COCO2Et (IV), EtCOC(:CHOEt)COCO2Et (V), and related compds. were carried out in an attempt to prepare 2,3,4,5-tetrasubstituted pyridines suitable for conversion to vitamin B6. Instead of the desired compds., the pyridines obtained were invariably substituted in the 2, 3, 5, 6-positions. IV (89 g.) and 62 g. II heated several hrs. on the steam bath and the product distilled in vacuo yielded 26 g. di-Et 2, 6-dimethyl-3, 5-pyridinedicarboxylate (VI); the residue on extraction with hot petr. ether (60-8°) left 2.5 g. white crystals, probably 3-acetyl-5-carbethoxy-6-methyl-2-pyridone (VII), m. 210-13°; the cooled petr. ether filtrate gave a solid (10.5 g.), m. 102.5-3.5°,

probably EtO2CC(Ac): CHNHC(:CMe2)CO2Et (VIII). The same experiment with 13 g. II and 16 g. HOCH:C(CO2Et)COCO2Et (IX) let stand 12 days at room temperature yielded 7.5 g. VI and 6.7 g. VIII. VI (35 g.) and 18 g. KOH refluxed 45 min. in 500 cc. absolute EtOH, filtered, the filtrate evaporated, the dried residue (24 g.) and 47 g. CaO in 40 cc. water distilled with a free flame, the distillate extracted with Et2O, the Et2O evaporated, and the residue distilled yielded 2, 6-lutidine, b. 139-41°; picrate, m. 100.5-102°. The di-K salt of the free acid of VI and 30 g. KMnO4 heated 4 hrs. on the steam bath in 500 cc. water, the mixture filtered, the filtrate evaporated to dryness in vacuo, and the residue let stand 24 hrs. in 300 cc. MeOH saturated with HCl yielded tetra-Me 2, 3, 5, 6-pyridinetetracarboxylate (X), m. 118-19° (from Et2O-Me2CO). IV (49 g.) in 50 cc. dry Et2O treated with 20 g. I, the mixture heated 30 min. on the steam bath, the liquid in 100 cc. Et2O washed with dilute Na2CO3 and water and dried, the Et2O evaporated, and the residue distilled yielded 36 g. di-Et 5-cyano-6-methyl-2,3-pyridinedicarboxylate (XI), b0.8 150°, b1 155°, nD25 1.5123, d2525 1.1708. Similar expts. in AcOH and absolute EtOH yielded 72 and 70%, resp., XI, b0.4 145-6°. XI (6.2 g.) and 4 g. NaOH refluxed 3 hrs. in 25 cc. water and 10 cc. EtOH and the solution digested with 200 cc. EtOH yielded 6.0 g. Na salt (XII) of 6-methyl-2, 3, 5-pyridinetricarboxylic acid. XII (5.8 g.) in 150 cc. water treated with 6.32 g. KMnO4 in 100 cc. hot water, the solution heated overnight on the steam bath, filtered, evaporated to dryness, and esterified with MeOH and HCl yielded 2 g. X, m. 118-19°. XII (3 g.) in 100 cc. MeOH saturated with HCl let stand 24 hrs. yielded the tri-Me ester (XIII), m. 78.5-9.5° (from Et2O). XII yielded the tris(p-bromophenacyl) ester, m. 190-2° (from dioxane-EtOH-water). IV (32 g.) in 25 cc. Et2O treated with 18 g. II, the mixture heated 30 min. on the steam bath, and distilled yielded 36 g. tri-Et 6-methyl-2, 3, 5-pyridinetricarboxylate (XIV), b0.5 160°, nD25 1.500, d2525 1.168. XIV sapond. with NaOH and esterified with MeOH and HCl yielded XIII, m. 78.5-9.5°. III and IV yielded 65-70% di-Et 5-acetyl-6-methyl-2,3-pyridinedicarboxylate (XV), b0.5 165-7°, m. 62-3°. XV (1 g.) moistened with alc., treated with 3 cc. 12 N NaOH, the mixture warmed a short time, diluted with 10 cc. water, and acidified with HCl yielded the free acid (XVI), m. 165-6° (decomposition) (from water). XVI (1 g.) treated with 25 cc. cold 5 N NaOH containing 1 g. Cl, the mixture let stand 1 hr., warmed 1 hr. on the steam bath, evaporated to dryness in vacuo, and the residue treated with MeOH containing HCl yielded XIII. IV (24.5 g.) in 100 cc. Et2O treated with 18 g. MeC(NH2):CHCONHPh, the solution let stand overnight, diluted with 200 cc. petr. ether, and chilled yielded 23 g. di-Et 5-carboxanilido-6-methyl-2,3-pyridinedicarboxylate, m. 121-2° (from C6H6-petr. ether). V (21.3 g.) and 10 g. I in 50 cc. Et2O yielded 11 g. Et 3-acetyl-5-cyano-6-methyl-2-pyridinecarboxylate (XVII), b0.8 132-7°, m. 94.5-95° (from Et2O-petr. ether). XVII shaken with 5 N NaOH and the solution acidified with HCl yielded the free acid (XVIII), m. 154-6° (decomposition) (from water). XVIII treated with NaOCl, hydrolyzed, and esterified yielded XIII. V (21.4 g.) and 13 g. II yielded 23 g. di-Et 3-acetyl-6-methyl-2,5-pyridinedicarboxylate (XIX), b2.5 180-5° m. 67-8°. XIX on sapon. yielded the free acid (XX), m. 210-13° (decomposition) (from water). XX on treatment with NaOCl yielded XIII. V (125 g.) and 58.5 g. III in 275 cc. Et2O let stand overnight, the solid filtered off, heated to boiling in 100 cc. EtOAc, and chilled yielded 37.5g. Et

β-[(1-methyl-3-oxo-1-butenylamino)methylene]-α, γ-dioxo-valerate (presumably), m. 164-5° (from EtOAc and C6H6petr. ether). The combined filtrates evaporated to dryness in vacuo, the residue in warm Et2O diluted with petr. ether until cloudy and chilled yielded 38.5 g. Et 3, 5-diacetyl-6-methyl-2-pyridinecarboxylate, m. 96-7° (from Et2O-petr. ether); free acid (XXI) m. 139-40° (decomposition) (from water). XXI on oxidation yielded XIII. CF3CO(:CHOEt)CO2Et (18 g.) and 11 g. II yielded 19 g. di-Et 2-methyl-6-trifluoromethyl-3, 5-pyridinedicarboxylate, b1 115-17°, nD25 1.4647, d2525 1.261.
